

LEVEL 1 (Q1-Q10)

Async Function Basics

Q1

Create an async function that returns:

Hello World

Q2

Create an async function that returns a user object.

Q3

Create an async function that returns an array of products.

Q4

Create an async function that returns current date.

Q5

Create an async function that returns random number.

Q6

Create an async function that returns student details.

Q7

Create an async function that returns company details.

Q8

Create an async function that returns cart items.

Q9

Create an async function that returns total order amount.

Q10

Create an async function and verify it always returns Promise.

LEVEL 2 (Q11-Q20)

Await Basics

Q11

Create:

`getUser()`

Use await to print user.

Q12

Create:

getProduct()

Use await.

Q13

Create:

getOrders()

Use await.

Q14

Create:

getPayment()

Use await.

Q15

Create delay function:

wait(2000)

Using Promise.

Q16

Print:

Start
(wait 2 sec)
End

Q17

Print:

1
(wait)
2
(wait)
3

Q18

Create async greeting system.

Q19

Create async OTP verification.

Q20

Create async login simulation.

LEVEL 3 (Q21-Q30)

Async + Try Catch

Q21

Create async function that throws error.

Handle using try catch.

Q22

Create async login validation.

Invalid login should throw error.

Q23

Create async bank withdrawal.

Insufficient balance should throw error.

Q24

Create async payment gateway simulation.

Q25

Create async registration validator.

Q26

Create async email validator.

Q27

Create async password validator.

Q28

Create async ATM simulation.

Q29

Create async product purchase flow.

Q30

Create async order cancellation flow.

LEVEL 4 (Q31-Q35)

Sequential Execution

Q31

Create:

Login

↓

Get User

↓

Get Orders

↓

Payment

Using async await.

Q32

Create movie booking flow.

Q33

Create food delivery flow.

Q34

Create train ticket booking flow.

Q35

Create college admission flow.

LEVEL 5 (Q36-Q40)

Promise.all + Async Await

Q36

Fetch:

Users
Products
Orders

Together using Promise.all.

Q37

Create 5 APIs with delays.

Execute parallel.

Q38

Build dashboard loader.

Load:

User
Orders

Products
Notifications

Together.

Q39

Create image gallery loader using Promise.all.

Q40

Create multiple file downloader using Promise.all.

LEVEL 6 (Q41-Q44)

Promise.allSettled()

Q41

Create:

3 APIs Success

2 APIs Fail

Show all results.

Q42

Build admin dashboard using allSettled.

Q43

Build batch file uploader.

Some uploads fail.

Q44

Build student result processor.

Some students fail.

LEVEL 7 (Q45-Q47)

Promise.race() + Promise.any()

Q45

Create 3 servers.

Return fastest response using race.

Q46

Create:

Server1 Fail

Server2 Fail

Server3 Success

Return first success using any.

Q47

Build API timeout mechanism using race.

LEVEL 8 (Q48)

Async Iteration

Q48

Create async generator.

Yield:

Ram
Shyam
Mohan

Consume using:

for await...of

LEVEL 9 (Q49)

Real Project

Q49

Build Async Notes Manager

Features:

Add Note
Delete Note
Update Note
Fetch Notes

All methods async.

LEVEL 10 (Q50) FINAL BOSS

Build Complete E-Commerce Async Flow

Flow:

Login

Get User

Get Products

Get Cart

Apply Coupon

Calculate Total

Payment

Generate Invoice

Send Email

Track Order

Delivery

Requirements:
